Methodology	4
Parties involved in the DSOCR	6
Attributes of the property that are currently under threat	6
Table: Schedule of Goals and Measures indicating the Desired State of Conservation	7

1

#### BACKGROUND

The World Heritage Committee inscribed the property on the List of World Heritage in Danger based on Decision **41 COM 7B.42** mainly for two reasons:

- "Current planning controls pose serious and specific threats to the Outstanding Universal Value (OUV) of the property" that, inter alia, manifest itself in an
- "Inadequate extent of change proposed for the Vienna Ice Skating Club Intercontinental Hotel Vienna Konzerthaus project."

The Committee therefore requested the preparation of a Desired State of Conservation for Removal of the property from the List of World Heritage in Danger (DSOCR) including a set of corrective measures and a timeframe for their implementation for submission to allow for their examination at its 2018 annual session.

In order to facilitate these measures, the State Party initiated an inclusive three-stage process involving all major stakeholders of the property and the particular project in 2018. It included an experts-workshop, a comprehensive Heritage Impact Assessment (as requested by the World Heritage Committee in Decisions 2016 and 2017) and in addition to this a High Level Joint ICOMOS / UNESCO Advisory Mission to the property. The procedure was a necessary preparatory exercise with the aim to re-establish a close cooperation between the World Heritage Centre, ICOMOS and the authorities in charge for safeguarding the property as well as to get a solid basis for the elaboration of the requested Desired State of Conservation for Removal (DSOCR). The World Heritage Committee welcomed this approach in its Decision (42 COM 7A.5) as well as the results communicated to the Committee in March 2019. The latter, together with the mission reports of 2012, 2015, 2018 and the corresponding decisions by the World Heritage Committee the framework for the corrective measures and the DSOCR as to be defined within this framework.

Much of the building stock and the historic layout of the Viennese first district is in a very good state of preservation. Nevertheless, the abovementioned developments since time of inscription led (and further on would lead) to changes of the cityscape, this being a major pillar to support the OUV of the property. Smaller but permanently progressing changes to the building stock, compared to its status at the time of inscription, as well as some insensitive contemporary interventions in or near important historic areas added to the reduction of the material authenticity of the property and other attributes which led to a deterioration of the OUV.

The State Party and the City of Vienna therefore aim for a prompt re-establishment of a statutory management and planning framework which ensures retention of those attributes of the Historic Centre of Vienna that contribute to the OUV of the property.

The actual threats that lead to the inscription on the List of World Heritage in Danger, and the DSOCR are set out in the below table. Among the corrective measures required to achieve the DSOCR, the most important steps are the:

- Implementation of amendments to the legal planning controls in order to avoid further deterioration and to retain the OUV of the property
- Redesign of the Heumarkt Neu project (Vienna Ice-Skating Club Intercontinental Hotel Vienna Konzerthaus area) and elaboration of a comprehensive visual study including an assessment of impacts on the OUV of the property based on the results of the Heritage Impact Assessment 2019 and reassessment of the redesign through an independent HIA to ensure that the OUV of the property is not harmed by the project.
- Preparation, implementation and demonstration of the effectiveness of a comprehensive Management Plan and a corresponding management system (incorporating identification, description and mapping of tangible and intangible attributes of the property) that ensures the safeguarding of the OUV of the property.

#### METHODOLOGY

This report is based on the Committee Decisions 2011 to 2019 and on the Mission Reports 2012, 2015 and 2019. It also takes into account the results of the HIA 2019 concerning the development of the property since inscription and the expectable impacts of the Heumarkt Neu project.

The schedule of goals and measures concentrates on the main objectives and does not include detailed to-do lists with corrective measures. The latter are provided by way of a 'Roadmap' – a schedule of 'Corrective Measures' - that will be updated and submitted to the World Heritage Committee by way of progress reporting. To give an example: The new Management Plan (MPL) that is a major request according to the Committee Decisions, Mission Reports and HIA will include further details recommended by the Mission Reports and / or Committee Decisions , such as regulations and provisions for:

- Cooperation between local and federal authorities on an institutional basis
- Creation of an independent Advisory Body
- Sustainable Development Strategies for the property
- Continued Monitoring of the property
- Elaboration of Heritage Impact Assessments
- Use of the Digital Height Model of the City of Vienna and 3D Modelling for HIAs

The new Management Plan will be submitted to the World Heritage Centre for review. Therefore, the more detailed tasks can be assessed by the review of the Management Plan.

This principle also applies to the revision of planning tools and legal regulations. The latter will form an integral part of the Management Plan that will set out and be consistent with the respective amendments to these provisions, which shall be legally implemented by way of adoption through the regional and national authorities after acceptance of the MPL by the World Heritage Committee.

The elaboration of a list of attributes reflecting the OUV, key places, key vistas etc. is a separate major tool to be elaborated as essential input to the Management Plan and will be encompassed by the latter as well as the planning regulations. Hence no detailed list of those tools and regulations is provided within this report, as this would go beyond of its scope.

The structure of the schedule of goals and measures follows the template provided by the World Heritage Centre. It includes inter alia two columns indicating the status of the respective measures at the time of submission of the report and the target date for their completion. The Management Plan for example currently is work in progress and it is proposed that it shall become operative in July 2021 after acceptance by the World Heritage Committee.

The schedule is subdivided into three sections: Protection and Management / Attributes / Integrity. Some goals and measures appear in more than one section in order to address more specific challenges and to emphasise aspects that require special attention - regardless of the need for a general compliance of the respective measures with the OUV in total. This applies for instance to the Roof Cadastre that shall be extended to iron and composite constructions, which mainly appear in the area of Ringstraße. The latter also being a major attribute reflecting the OUV of the property and still providing possibilities for roof conversions and extensions. Therefore a measure specifically addresses roof conversions in this area.

To facilitate the traceability of the goals and measures, a table of Committee Decisions and schedules which provide the recommendations of the Mission Reports 2012, 2015 and 2018 are provided as annexes to this DSOCR.

Reports on the progress of the implementation of corrective measures will be provided by way of updated "roadmaps" annexed to the regular State of Conservation (SOC) reports.

#### PARTIES INVOLVED IN THE DSOCR

The DSOCR was jointly developed by the Federal Ministry for Arts, Culture, Civil Service and Sports, the Federal Monuments Authority and the Government and responsible authorities of the City of Vienna. In keeping with Decision 41 COM 7B.42, the Austrian authorities closely involved and consulted the World Heritage Centre and ICOMOS International in the drafting of the DSOCR.

In order to reach a broader acceptance and enable preventive measures, ICOMOS Austria and the Austrian Commission for UNESCO were consulted during the process.

## ATTRIBUTES OF THE PROPERTY THAT ARE CURRENTLY UNDER THREAT

In accordance with the mission reports 2012, 2015, 2018, the results of the Heritage Impact Assessment 2019 and the related Committee Decisions the following attributes of the property are recognised as currently under threat and/or deteriorated:

- 1. Urban morphology (criterion ii and statement of integrity): overall visual appearance of the property as a whole, integrity of the historic fabric and urban skyline and key views and vistas (due to inappropriate developments including excessive roof top conversions)
- 2. Urban layout of Ringstraße and Glacis (criterion iv): Due to the building mass and height allowed by current controls, as evidenced by the proposed Heumarkt Neu project (according to Decision 41 COM 7B.42) neglecting the logic of the Gründerzeit development.
- 3. Roofscape of the property (criterion ii and statement of integrity) due to excessive roof top extensions and conversions also affecting rare mansard roofs that constitute prominent material testimony for the baroque period.
- 4. Baroque layout and visual integrity of the Belvedere Complex (Palaces and Gardens) within the early modern logic of the baroque "Gesamtkunstwerk" (due to existing and potential further disturbances of the main historic vista, it being an essential component of the overall artistic concept)

- 5. Karlsplatz St. Charles Church and adjacent Wien Museum and Winterthur Building (criterion ii and iv): due to proposed developments in the direct vicinity of the St. Charles Church, the latter being one of the world's major baroque artworks
- 6. Material authenticity of the historic / original building stock of the property: The material authenticity of the historic building-stock of the property in general is in a very good condition. Nevertheless, due to a very permissive interpretation of the Vienna Memorandum, the focus in the last years shifted from conservation to renewal of building stock that is neither under national heritage protection nor part of a protection zone according to the Viennese Building Code.
- 7. Historic gardens and green spaces: Gardens, parks and green spaces in the Historic Centre of Vienna are in general very well maintained and in good condition. As the statutory protection of historic gardens currently is limed to gardens in public ownership, some contemporary interventions recently put in place bear the risk of weakening this status. The same applies to not distinctively defined development-areas as laid down in the Masterplan Glacis.
